

Milauskas Eye Institute Clinical Study on Advanced LASIK

- i.** Study Overview: Leading Eye Clinic, Milauskas Eye Institute is currently conducting a clinical study on the safety and efficacy of Advanced Lasik using the Allegretto-Wave and Intralase Technologies. Intralase laser technology is used during the initial step of the LASIK procedure. This laser technology, which is designed to not only replace the mechanical device used in conventional LASIK, but to also make LASIK safer and more precise.
- ii.** This limited clinical study will monitor the results of our custom LASIK procedure using the Allegretto Wavelight laser with the Intralase. Our doctors and staff will be monitoring post-operative healing, patient comfort, overall patient safety, final refractive outcome (visual result) and overall patient satisfaction. Results from this study will be compared to conventional Lasik technologies and older generation laser systems. The study will involve patient evaluation, examination and input at the following intervals:
 - 1. All pre-operative visits*
 - 2. 1-day post-operative visit*
 - 3. 1-week post-operative visit*
 - 4. 3-4 months post-operative visit*
 - 5. 1 year post-operative visit*
- iii.** To qualify for this clinical study, you must be above age 21, have naturally occurring myopia, hyperopia or astigmatism, have had no previous eye surgery, have generally healthy corneas and be willing to complete all pre and post-operative office visits. There is no upper age limit to this study.
- iv.** All qualified candidates in this study will receive a savings of up to \$1500.00 on their procedure.
- v.** The study and its savings are based on a bilateral procedure. Both eyes must be treated.
- vi.** The length of our initial Clinical Study on Intralase will be limited to the first 200 patients who qualify. All potential candidates will receive a complimentary comprehensive LASIK evaluation to determine their candidacy.
- vii.** The normal 'Informed Consent' process and patient education applies to Study candidates as well, and they will be required to sign standard patient consent forms used for conventional LASIK patients. The list of standard risks, complications and side effects associated with standard LASIK apply to Study candidates as well.
